PRESS RELEASE

The AIRcable OptiEyes: The Smallest Bluetooth® Surveillance Camera (Non-Security)

Santa Cruz, CA—November 19, 2008— Wireless Cables, Inc. is pleased to announce the smallest Bluetooth camera, the AIRcable OptiEyes. Both a wireless streaming video camera and wireless digital camera, the AIRcable OptiEyes is equipped with a powerful, highly sensitive Bluetooth transmitter, which has a range of 100 meters (up to 30 km when used in conjunction with the AIRcable Industrial XR).

The AIRcable OptiEyes streams video via the Bluetooth® 2.0 EDR standard: ideal for any remote wireless video application. At a mere 16 grams in weight and 69 x 21 x 14 mm in size, the AIRcable OptiEyes delivers color resolution video images (320 x 240 QVGA), which can be viewed on a cell phone or PC. If desired, users can simultaneously utilize up to seven cameras with a single PC, as well. Given its long range, Bluetooth connectivity and small form factor, the AIRcable OptiEyes makes an excellent wireless remote camera or wireless web camera (not intended for security purposes). The AIRcable OptiEyes also serves as a still camera, with the preview image streamed over Bluetooth, and the camera wirelessly controlled via Computer, PDA or mobile phone (color output resolution = 640 x 480 pixels).

Available and shipping now, the AIRcable OptiEyes offers 1.5 hours of continuous usage time, up to 90 hours of stand-by time, and low power consumption—making it extremely easy to deploy in almost any application. For more information on the camera and related system requirements, please see: www.aircable.net/optieyes.html.

About Wireless Cables Inc.

Wireless Cables Inc. manufactures plug-and-play Bluetooth-based wireless accessories for PDAs, laptops, and wireless serial and USB cable replacements. Our AIRcable products eliminate the inconvenience and cost associated with connecting cable devices or most Bluetooth devices. No wireless connection software or knowledge of Bluetooth is required on the part of the user because the software resides in our hardware. We offer a wide range of products—from our newly released wireless headset to cable replacements—making Bluetooth connectivity available on a wide range of devices. Through our unique patented technology, we've eliminated the complexities of software setup and device configuration, making AIRcable the most flexible, powerful, and cost-effective Bluetooth-serial product on the market today. In addition to point-to-point, cable mode connection, AIRcable can also be configured to provide Bluetooth service to other devices and can automatically locate other Bluetooth devices. Wireless Cables also provides custom product development for OEMs who wish to integrate AIRcable technology into their devices.

Wireless Cables, Inc. is based in Santa Cruz, California.
